# Introduction

## 8WH and 8WA Terminal Blocks

### General data

#### Overview

		Connection system	Section	Special features
<b>8WH terminals</b>				
		8WH6 iPo plug-in terminals (iPo: in-Push-out)	2	The iPo connection method combines the advantages of spring-loaded and plug-in terminals - both rigid and flexible wires are easy to insert without the need for tools. Fast installation - with a minimum of effort and maximum contact stability.
		8WH6 iPo installation terminals	3	The iPo connection method combines the advantages of spring-loaded and plug-in terminals - both rigid and flexible wires are easy to insert without the need for tools. Fast installation - with a minimum of effort and maximum contact stability. Fast removal by simply pressing the unlatching button.
		8WH2 spring-loaded terminals	4	With the spring-loaded connection method, the tension spring exerts constant pressure on the conductor, which ensures excellent contact stability - even with applications subject to high levels of vibration. Fast removal by simply pressing the unlatching button.
		8WH5 combination plug-in terminals	5	Combination plug-in terminals are used where high availability is essential in the event of a fault. The contact system is able to withstand even extreme levels of vibration and both the terminal and the connector are fingerproof.
		8WH3 insulation displacement terminals	6	Thanks to the use of insulation displacement terminals, there is no need to strip the conductor. This ensures secure contact between the conductor and the connecting wire of the terminal.
		8WH1 screw terminals	7	The screw terminals have an impressively compact design and offer optimum handling. The elastic deformation capability of the terminal body prevents any creepage of the clamped conductor. Suitable for applications up to 1000 V DC.
		Accessories for 8WH	8	The 8WH accessories supplement the 8WH product range with the additional components required for installation.
<b>8WA terminals</b>				
		8WA1 screw terminals	9	The tried and tested screw terminals are insulated on both sides and enclosed at both ends. These terminals are extremely robust and can withstand high mechanical and thermal loads.
		Accessories for 8WA	10	The 8WA terminal block accessories supplement the 8WA product range with the additional components required for installation.

#### Rated short-time withstand current

Our terminals are able to withstand a rated short-time current corresponding to a current density of  $120 \text{ A/mm}^2$  specific to the nominal cross-section for one second.

### Overview

#### Overview

	Devices	Page	Function
	Through-type terminals	2/4	Connection of incoming and outgoing conductors
	Fuse terminals	2/8	Terminals which can be used to protect control circuits, for example
	Isolating blade terminals	2/9	Isolation of the circuit, e.g. for test purposes
	Isolating terminals	2/11	Isolation of the circuit, e.g. for test purposes
	Two-tier terminals	2/13	Compact form of the terminal blocks in which two connection wires can be installed

## Overview

iPo connection method: Characterized by its simple and direct conductor connection, this series utilizes all the benefits of the 8WH system.

Super-light insertion: With an up to 50% lower insertion force, the iPo connection method permits easy and direct insertion of rigid and flexible conductors with end sleeves with a cross-section of more than  $0.34 \text{ mm}^2$ .

Pusher button function: The actuation button is used to open the spring to either release the conductor or to connect smaller cross-sections from  $0.14 \text{ mm}^2$ . It can be operated by any tool.

Easy bridging: The double bridge shaft supports the interconnection of any number of terminals using 2-pole jumpers. The 2-pole to 50-pole jumpers enable up to 50 terminals to be connected in a single step.

### 8WH6 through-type terminals

#### Overview

8WH6 through-type terminals are ideal for the direct tool-free wiring of conductors with end sleeve or rigid conductors. Easy insertion of flexible conductors with end sleeves upwards of 0.34 mm<sup>2</sup>. The actuation button can be used to open the clamping point with any type of screwdriver in order to unwire or wire small conductors. The compact design and front connection permit wiring in the narrowest of spaces. The double bridge shaft enables fast creation of an individual potential distribution and infeed, e.g. using a screw terminal.

A label can be snapped on to the middle of each terminal at the front. Further labels can also be mounted flat on the side of the terminals.

## Overview

Through-type terminals with isolating blade capability are the most commonly used terminal types in measuring and control technology. Key features of the 8WH6 isolating blade terminals are the slim design of only 5.2 mm and their high current-carrying capacity. Convenient testing is made possible by the integral double function shaft located on one side of the isolating point and the integrated test contact located on the other. Standard connecting combs allow easy execution of all potential-distribution tasks. Three and four-wire terminals up to 2.5 mm<sup>2</sup> are available for the multi-conductor connection.

A label can be snapped on to the middle of each terminal at the front. Further labels can also be mounted flat on the side of the terminals.

Note:

For general accessories for 8WH terminal blocks, [see chapter 8](#).

## Overview

8WH6 isolating terminals in iPo connection technology are available for special wiring tasks. With the same contour as the isolating blade terminals, 8WH6 isolating terminals are fitted with a universal plug-in zone in the middle of the terminal. Numerous wiring tasks can be performed on a terminal width of 5.2 mm by integrating the isolated through-type connector, the isolating plug, the component connector or the fused plug.

A label can be snapped on to the middle of each terminal at the front. Further labels can also be mounted flat on the side of the terminals.

Note:

For general accessories for 8WH terminal blocks, [see chapter 8](#).

## Overview

With the two voltage levels routed through two tiers, the 8WH6 two-tier terminals require 50% less space than equivalent single-tier terminals. To implement a wide range of wiring tasks, connecting combs can be fitted to both tiers of the two-tier terminal series. Facilities for inscription are provided at each clamping point.

Two-tier terminals with equipotential bonding for the upper and lower tiers are also available.

With the same contour as 8WH6 two-tier terminals, 8WH6 two-tier PE terminals round off the product range. Perfect mechanical and electrical contact with the support rail is provided by simply snapping the terminals onto the rail. 8WH6 PE two-tier terminals comply with all the requirements of IEC 60947-7-2. These include in particular:

- Low contact resistance
- Stainless clamping points
- Green-yellow enclosure
- Additional inscription options.

A label can be mounted flat at each clamping point by simply snapping it on.

# 8WH6 iPo Installation Terminals

## 8WH through-type terminals

3

### Overview

All types of conductors can be used with 8WH6 iPo technology. Rigid conductors and crimped flexible conductors are plugged directly into the terminal.

Flexible, untreated conductors can be connected using a screw-driver.

These terminals can be used interconnected with the N-busbar 10 × 3 mm.

A label can be snapped on to the middle of each terminal at the front. Labels can also be mounted flat on the clamping points of the terminals.

# 8WH6 iPo Installation Terminals

## 8WH through-type screw terminals

3

### Overview

We offer a comprehensive range of installation terminals with iPo technology for use in building management systems. We also offer a range of compact, cost-effective terminal blocks with screw terminals for connecting larger cross-sections.

Terminal blocks mounted on N-busbars are most commonly used in building management systems. In order to enable the butt-mounting of different terminals, contact to the N-busbar is always on the same mounting level. This means that 8WH1-001 screw terminals and 8WH6-001 plug-in terminals can be combined as required and mounted on a single support rail.

Labels can be affixed at each clamping point by simply snapping them on at the front.

# 8WH6 iPo Installation Terminals

## 8WH N-conductor isolating terminals

3

### Overview

The N-conductor disconnect slides are in the same position on all 8WH6-001 terminals using iPo plug-in technology.

A 10 mm × 3 mm busbar is used.

**Notice:** Only use Cu busbars.

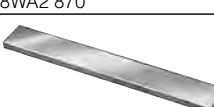

Installation instructions: To ensure that the N-busbars are securely mounted, the support brackets must be placed at the beginning and end of each terminal strip (in the case of longer terminal strips: every 20 cm).

A label can be snapped on to the middle of the terminal at the front. Labels can also be mounted flat on the clamping points of the terminals (not with N-busbar connection).

# 8WH6 iPo Installation Terminals

## 8WH N-conductor isolating screw terminals

3

### Overview

We offer a comprehensive range of installation terminals with iPo plug-in technology for use in building management systems. We also offer a range of compact, cost-effective terminal blocks with screw terminals for connecting larger cross-sections.

Terminal blocks mounted on N-busbars are most commonly used in building management systems. In order to enable the butt-mounting of different terminals, contact to the N-busbar is always on the same mounting level. This means that 8WH1-001 screw terminals and 8WH6-001 plug-in terminals can be combined as required and mounted on a single support rail.

The compact design of our N-conductor isolating terminals makes for a neat and clearly arranged terminal strip. The N-busbar can be connected over the terminal or over the disconnect slide of the N-conductor isolating terminal. The N-conductor isolating terminal also makes it easy to perform insulation measurements.

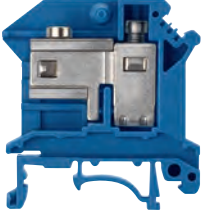

Labels can be affixed on the clamping points (screw) by simply snapping them on at the front.

**Notice: Only use Cu busbars.**

# 8WH6 iPo Installation Terminals

## 8WH installation terminals

3

### Overview

The three-tier plug-in terminals offer optimum operating characteristics for modern building installations. The plug-in connection allows tool-free wiring of the solid conductors.

These terminals can be used interconnected with the N-busbar 10 × 3 mm.

**Notice:** Only use Cu busbars.

Thanks to their compact design, the three-tier terminals can be installed in all types of building distribution boards. A load circuit can be quickly and easily wired, for example using a 5.2 mm wide installation terminal with terminal size 2.5 mm<sup>2</sup> and PE/L/NT connections.

The double bridge shafts support a multitude of individual wiring tasks. This also means it is practical and convenient to make subsequent modifications to the installation.

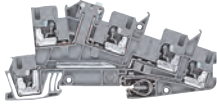

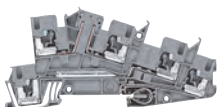

Labels can be mounted flat on the clamping points of the terminals.

## Introduction

### Overview

4

8WH terminals	Devices	Page	Application
	Through-type terminals	4/7	Connection of incoming and outgoing conductors up to 35 mm <sup>2</sup>
	Hybrid through-type terminals	4/18	Terminals with a range of connection methods
	Fuse terminals	4/21	Terminals which can be used to protect control circuits, for example
	Isolating blade terminals	4/23	Isolation of the circuit, e.g. for test purposes
	Isolating terminals	4/25	Isolation of the circuit, e.g. for test purposes
	Two-tier terminals	4/27	Compact form of the terminal block in which two connection wires can be installed
	Three-tier terminals	4/33	Compact terminal blocks up to 2.5 mm <sup>2</sup> , in which three connection wires can be installed
	Four-tier motor terminals	4/35	Compact terminal blocks up to 4 mm <sup>2</sup> , in which three connection wires plus PE can be installed
	Diode terminals	4/37	Terminal blocks with integrated diodes
	Two-tier diode terminals	4/39	Terminal blocks with integrated diodes

<sup>1)</sup> Only the main terminal types are listed here. You will find further versions on the following pages.

# 8WH2 Spring-Loaded Terminals

## General data on 8WH

4

The space-saving design and conductor routing from above make spring-loaded terminals ideal for controlgear installations with minimum available space. The terminals are open at one end and can be closed using the appropriate covers.

The large and unambiguous marking in the center of the terminal is essential for ensuring reliable installation in minimum time. Each clamping point can also be separately labeled.

Spring-loaded terminals provide a large connection compartment for fast wiring of flexible and rigid conductors, including conductors with nominal cross-section and a fitted end sleeve.

Reducing combs enable easy connection of terminals with various nominal cross-section. For example, they can be used for the fast creation of infeed blocks, e.g. by connecting a 10 mm<sup>2</sup> spring-loaded terminal with a 2.5 or 4 mm<sup>2</sup> spring-loaded terminal.

# 8WH2 Spring-Loaded Terminals

## General data on 8WH

4

The 2 to 50-pole connecting combs also considerably reduce the time needed for assembly and wiring as they enable up to 50 terminals to be connected in a single step.

The universal plug-in zones of the isolating terminal can accommodate the isolated through-type connectors, isolating plugs, component connectors and fused connectors.

Contact tabs can be removed from the standard comb in order to skip individual terminals. This means that two potentials can run in parallel on a single terminal strip. The contact points can additionally be marked.

The component connector enables the convenient equipping with electronic components. One turn of the screwdriver opens the contact points and the component is easily inserted.

# 8WH2 Spring-Loaded Terminals

## General data on 8WH

4

A comprehensive range of test accessories is also available for the spring-loaded terminal series. The test adapters for  $\varnothing$  4 mm test plugs and modular test plugs enable all measuring and testing jobs to be performed in minimum time.

The compartment partitions project beyond the contours of the terminals and separate the groups both visually and electrically.

Cover segments are used to cover the projecting terminal segments of three and four-wire terminals when mounting two-wire terminals side-by-side. This ensures touch protection.

**Note:** The accessories for 8WH can only be used for 8WH terminals.

### Overview

#### With two clamping points

The through-type terminals have an impressive space-saving design and offer optimized handling. With its front connection arrangement this series provides additional space between the cable ducts for wiring.

The double bridge shaft enables individual chain bridging with connecting combs. Accessories are available for testing and labeling.

#### With three clamping points

Terminals with three clamping points are a space-saving alternative to the standard through-type terminals for branching the potential.

It is often necessary for three conductors to be routed to a single terminal. This three clamping point version enables this without the need for additional terminals and jumpers.

#### With four clamping points

The double connection of the through-type terminals with four clamping points enables four conductors to be connected to a single potential. These versions with four clamping points are therefore suitable for use as compact potential distributors.

A label can be snapped on to the middle of each terminal at the front. Further labels can also be mounted flat on the side of the terminals.

#### PE/ground conductor function

The PE through-type terminals are available with the same contour as the through-type terminals. Simply snap the terminals onto the support rail to achieve full mechanical and electrical contact with the support rail.

The PE through-type terminals meet all the requirements of IEC 60947-7-2:

- Low contact resistance
- Stainless clamping points
- Green-yellow enclosure
- Additional inscription options

# 8WH2 Spring-Loaded Terminals

## 8WH hybrid through-type terminals

### Overview

4

The terminal connection compartment, on the spring-loaded side as well as on the screw side, enables connection to a nominal cross-section of 2.5 mm<sup>2</sup> or 4 mm<sup>2</sup>, with or without end sleeves. The advantages of the different connection types are due to the fact that the spring-loaded terminal of the hybrid through-type terminal is used inside the control cabinet and the universal screw terminal is used at the end-user's side. A PE terminal with the same contour is available for the three-wire terminal. Contact is made by simply snapping the terminal onto the support rail.

This meets the requirements of IEC 60947-7-2:

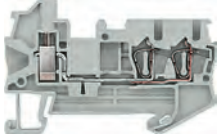

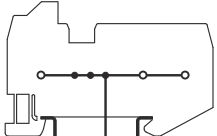

- Low contact resistance
- Stainless clamping points
- Green-yellow enclosure
- Additional inscription options.

A label can be snapped on to the middle of each terminal at the front. Further labels can also be mounted flat on the side of the terminals.

### Overview

#### Fuse terminals for blade-type fuses

The fuse terminals for blade-type fuses accommodate blade-type fuses according to ISO/DIS 8820 / DIN 72581-3. Terminals with LED display are available for fast fault diagnosis "at a glance".

#### Fuse terminals for G fuse links

Fuse terminals perform two important tasks in connected electrical systems. Firstly, they act as a fuse carrier and, secondly, as a potential distributor.

The full-length bridge shaft enables uninterrupted bridging between the through-type terminals and the fuse terminals.

Fuse terminals for G fuse links are available for standardized electrical fuse formats 5 × 20 mm and 6.3 × 32 mm (inch fuse) – and are optionally available with LED display to signal a blown fuse.

A label can be snapped on to the middle of the terminal at the front. Further labels can also be mounted flat on the side of the terminals.

<sup>1)</sup> Please note: The G fuse holders must be selected according to the maximum power loss (heat dissipation) of the G fuse links. Depending on the application and method of installation, the heat rise conditions in closed fuse holders must be tested. Higher ambient temperatures represent an additional load for the fuse links. A shift in rated current should therefore be taken into account in such applications. When selecting G fuse links, make sure that they do not exceed the specified maximum power loss. For specification details, contact the fuse manufacturer.

### Overview

Through-type terminals with isolating blade capability are the most commonly used terminal types in measuring and control technology.

The isolating blade terminals with nominal cross-section of 2.5 mm<sup>2</sup> are characterized in particular by their slim design of 5.2 mm and their high current-carrying capacity of 16 A. In addition the terminals provide a test tap parallel to the isolation point for 2.3 mm  $\varnothing$  test plugs. Potential distributors can be conveniently assembled using connecting combs.

Terminals with three and four clamping points are available for multi-conductor connection. With their compact design these terminals can also be used in small terminal boxes and their front connection arrangement enables user-friendly wiring.

The isolating blade is secured to the terminal so that it cannot be lost.

A label can be snapped on to the middle of the terminal at the front. Further labels can also be mounted flat on the side of the terminals.

Note:

For general accessories for 8WH terminal blocks, see chapter 8.

### Overview

The isolating terminals are available with the same contour as the isolating blade terminals. The terminals excel with their narrow width of only 5.2 mm and their high current load rating of 16 A.

There is a test option for 2.3 mm  $\varnothing$  test plugs at both ends of the isolating point.

The 6.2 mm wide isolating terminal with terminal size 4 mm<sup>2</sup> is a base terminal for accommodating:

- Isolating plugs
- Through-type connectors
- Fused connectors
- Component connectors

A label can be snapped on to the middle of the terminal at the front. Further labels can also be mounted flat on the side of the terminals.

Note:

For general accessories for 8WH terminal blocks, [see chapter 8](#).

### Overview

#### Standard two-tier terminals

With the two voltage levels routed through two separate tiers, the two-tier terminals require 50% less space than equivalent single-tier terminals. To implement a wide range of wiring tasks, connecting combs can be fitted to both tiers of the spring-loaded terminal series. Facilities for inscription are provided at each clamping point.

#### PE/ground conductor function

Perfect mechanical and electrical contact with the support rail is provided by simply snapping the terminals onto the rail.

The PE two-tier terminals meet all the requirements of IEC 60947-7-2:

- Low contact resistance
- Stainless clamping points
- Green-yellow enclosure
- Additional inscription options.

#### PE/L and PE/N types

The PE/L and PE/N types provide a PE/ground contact to the support rail in the lower tier. The upper tier is designed as a through-type tier. Color coding of the PE and neutral tiers enables clear and unambiguous distribution of the potential.

The clamping points of two-tier terminals can be inscribed with flat labels.

Note:

For general accessories for 8WH terminal blocks, [see chapter 8](#).

### Overview

Our three-tier terminals offer three feed-through levels in a slim 5.2 mm terminal enclosure. They enable high wiring density – ideal for switchboards where space is at a premium.

With one bridge shaft per tier, these terminal blocks are ideal for use as compact potential distributors or initiator terminals. All six clamping points are interconnected on the equipotential bonding versions.

The three-tier terminal range is rounded off with a PE terminal with the same contour.

### Inscription

Each tier of three-tier terminals can be inscribed with flat labels. If a label holder is used, the labels can be inserted at the front.

### Benefits

- Three feed-through levels with minimum footprint
- Comprehensive range of inscription options
- Matching accessories for 8WH terminal range
- One bridge shaft per tier
- Label holder is inserted.

### Overview

#### Terminal size 2.5 mm<sup>2</sup>

The four-tier motor terminals with terminal size 2.5 mm<sup>2</sup> are ideal for the compact wiring of AC loads. They have three through-levels and one PE connection which is contacted by simply snapping it onto the mounting rail.

No cross-bridging option.

#### Terminal size 4 mm<sup>2</sup>

Like the 2.5 mm<sup>2</sup> version, the four-tier motor terminal with 4 mm<sup>2</sup> also allows the wiring of three phases and the PE in a single terminal. This terminal is enclosed at both ends.

No cross-bridging option.

#### Integrated PE/ground conductor function

PE contact with the support rail is made by simply snapping the terminal onto the rail. This makes the four-tier motor terminals with terminal size 4 mm<sup>2</sup> ideal for the space-saving wiring of AC motors.

#### Inscription

Each clamping point has a facility for inscription and a test option for 2.3 mm  $\varnothing$  test plugs.

There is also sufficient space to make large marking with labels in the middle of the terminal.

Labels can be mounted flat at the side of the terminals by simply snapping on

### Overview

Diode terminals with a nominal cross-section of 2.5 mm<sup>2</sup> and a mounting width of just 5.2 mm can be used to implement many different wiring tasks. The diode is soldered in from left to right or vice versa as required.

A label can be snapped on to the middle of each terminal at the front. Further labels can also be mounted flat on the side of the terminals.

### Overview

Two-tier diode terminals can be used together with different versions to implement many different wiring tasks.

The following circuits are possible in the tightest spaces:

- Freewheel diode circuits
- Lamp test circuits
- Signaling and fault signaling circuits.

The clamping points of two-tier terminals can be inscribed with flat labels.

# 8WH5 Combination Plug-In Terminals

## Introduction

### Overview

5

	Devices	Page	Function
	8WH5 through-type terminals	5/5	Terminals for the connection of combination plug-in terminals
	8WH5 hybrid through-type terminals with iPo connection	5/7	Terminals for the connection of combination plug-in terminals
	8WH9 plugs	5/8	For connection of combination plugs for fast wiring

### Features

Conductor cross-section	Terminal type <sup>1)</sup>	Color	Combination plugs		Order No. (digits 8 ... 12)
			Terminal type → Design → No. of clamping points → Order No. (digits 1 ... 7) →	Standard 4 8WH5 004	
2.5 mm <sup>2</sup>	Through-type	Gray	✓	✓	0AF00
		Blue	✓	✓	0AF01
		PE Green/yellow	✓	✓	0CF07

### Benefits

#### High-performance contact

The advanced plug-in system of the combination plug-in terminals enables plug-in wiring up to a rated current of 32 A and a rated voltage of 800 V. The contact system withstands extreme vibration thanks to the integral overspring.

#### Fingerproof design

With its fingerproof base terminals and plugs, the combination plug-in terminal system provides maximum user protection. As well as enhancing safety, this provides exceptional flexibility during configuration: the power can be supplied either through the terminals or the plugs.

#### Time and cost-saving potential distribution

When feeding in large cross-sections, the reducing comb enables time and cost-saving distribution of the potential. For example, it can link a 10 mm<sup>2</sup> through-type terminal to a 2.5 mm<sup>2</sup> through-type terminal and two clamping points.

#### Standardized connecting comb system

The standardized connecting comb system allows up to 50 terminals to be connected efficiently and quickly with a single jumper. Teeth can be removed to skip individual terminals.

# 8WH5 Combination Plug-In Terminals

5

## Introduction

### Universal plug-in zone

The universal plug-in zone of the isolating terminal can accommodate isolated through-type connectors, isolating plugs, component connectors and fused connectors.

### Assembling test adapters

Test adapters are available for  $\varnothing 4$  mm test and safety test plugs. Test plugs can be individually assembled, thanks to the modular design of the test plugs. Measuring leads can be connected over a  $1.5 \text{ mm}^2$  spring-loaded terminal.

### Coding the combination plug-in terminals

The combination plug-in terminals can be coded with the pin on the plug. The pin is simply removed from the plug, rotated and fitted in the coding position of the base terminal.

### Snap-on strain relief

Snap-on clamps are available to relieve cable strain at the plugs. Latches are also available to secure the plugs firmly to the base terminals.

### Overview

Plugs can be connected at both ends of the terminal using the through-type terminals of the combination plug-in terminals. This makes the combination plug-in terminal system even more flexible and allows the terminals to be used as connecting elements between modules.

The plugs used have a terminal size of 2.5 mm<sup>2</sup>, thus enabling continued use of familiar accessories, such as latches, strain relief and shield connectors.

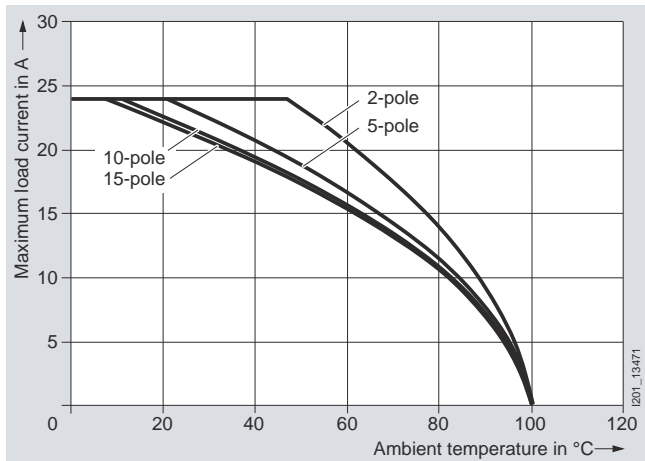

PE terminals with the same contour are available for the base terminals. These are simply snapped onto the support rail to establish a connection to ground potential.

A label can be snapped on to the middle of each terminal at the front. Further labels can also be mounted flat on the side of the terminals.

# 8WH5 Combination Plug-In Terminals

8WH5 hybrid through-type terminals with iPo connection

## Overview

The 8WH5 hybrid through-type terminals with iPo connection provide a modular solution for fast, flexible wiring of plants and machines. They combine the advantages of the combination terminal system with those of the iPo terminals.

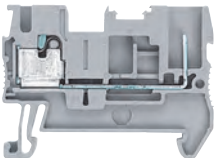

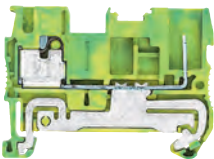

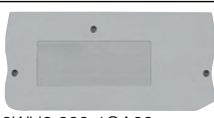

A label can be snapped on to the middle of each terminal at the front. Further labels can also be mounted flat on the side of the terminals.

# 8WH5 Combination Plug-In Terminals

## 8WH9 plugs

5

### Overview

Assembled by the user in-situ from single-pole plug elements, the combination plug-in terminals in kit form provide a customized solution for every task.

For the existing plugs with terminal sizes 2.5 mm<sup>2</sup> and 4 mm<sup>2</sup>, and the plug with comb connection and terminal size 2.5 mm<sup>2</sup>, single-pole basic versions in the colors gray, blue and green-yellow are available.

A left and a right element are needed for the two ends of the assembled connector for each multi-pole plug. The number of middle elements depends on the plug's required number of poles. The individual elements are simply pushed together and latched with securing pins. The right-hand component has an integrated cover, which covers the plug block.

Labels enable flat inscription of the plugs.

### Design

Example of a 6-pole plug

A key feature of the insulation displacement series is its IDC rotary connection. This concept saves considerable space in the control cabinet without impairing other quality features, such as

- Large surface marking
- Maximum connection compartment
- Flexible connecting combs.

Time savings of 60 % and more compared to other connection systems.

With the quick-connect insulation displacement terminal system, there is no need to strip the insulation or protect the splice. The cables only need to be cut to length for contacting within seconds.

# 8WH3 Insulation Displacement Terminals

## Introduction

6

Conductor connections from 0.25 to 2.5 mm<sup>2</sup> are produced by the cutting contact. High-grade special alloys and latching of the switch states ensure reliable electrical connections at all times. Large, spring-loaded contact points ensure 24 A current load rating.

The standardized connecting comb system allows several terminals to be linked efficiently and quickly with a single jumper. The range covers 2 to 50-pole jumpers, which can help considerably to reduce the amount of wiring outlay.

When feeding in large cross-sections, the reducing comb enables time and cost-saving distribution of the potential. For example, it can link a 10 mm<sup>2</sup> spring-loaded through-type terminal to a 1.5 mm<sup>2</sup> insulation displacement through-type terminal and two clamping points - or to a 2.5 mm<sup>2</sup> insulation displacement through-type terminal and two clamping points.

Teeth can be removed from the standard comb in order to skip individual terminals, so that two potentials can run in parallel. A marking option is provided on the top of the connecting comb.

# 8WH3 Insulation Displacement Terminals

## Introduction

6

The universal plug-in zone of the isolating terminal can accommodate isolated through-type connectors, isolating plugs, component connectors and fused connectors.

The unambiguous and easy-to-read marking in the center of the terminal is essential for time-saving installation. In addition to the large inscription in the center, each clamping point can also be labeled separately.

Test adapters are available for  $\varnothing$  4 mm test and safety test plugs. Test plugs can be individually assembled, thanks to the modular design of the test plugs. Measuring leads can be connected over a 1.5 mm<sup>2</sup> spring-loaded/insulation displacement terminal.

The cover segment is used to cover multi-wire terminals when mounting two-wire terminals side by side. These devices meet all fingerproof requirements.

### Overview

A key feature of the insulation displacement through-type terminal is its compact design. With its clear and space-saving front connection arrangement, this insulation displacement series provides additional space between the cable ducts for wiring. Using the double bridge shaft, it is also possible to use individual chain bridging, as well as a reducing comb, e.g. from a 2.5 mm<sup>2</sup> tension spring through-type terminal to a 35 mm<sup>2</sup> tension spring through-type terminal. Used in this way, reducing combs enable the quick and easy assembly of potential incoming feeders and distributors.

A label can be snapped on to the middle of the terminal at the front. Further labels can also be mounted flat on the side of the terminals.

### Overview

Key features of the IDC two-tier terminals for terminal size 1.5 mm<sup>2</sup> are their ultra compact design and the double bridge shaft for each tier. This enables simultaneous bridging and testing.

With its clear and space-saving front connection arrangement, this two-tier terminal series provides additional space between the cable ducts for wiring.

The PE/ground conductor terminal of this range meets all the requirements of IEC 60 947-7-2.

These include:

- Low contact resistance
- Stainless clamping points and PE mounting foot
- Green-yellow enclosure and
- Additional inscription options.

The clamping points of two-tier terminals can be inscribed with flat labels.

### Overview

8WH3 isolating terminals using insulation displacement technology are available for special wiring tasks. Numerous wiring tasks can be performed on a terminal width of 5.2 mm by integrating the isolated through-type connector, the isolating plug, the component connector or the fused plug.

A label can be snapped on to the middle of each terminal at the front. Further labels can also be mounted flat on the side of the terminals.

# 8WH1 Screw Terminals

## Introduction

### Overview

	Devices	Page	Function
	Through-type terminals	7/4	Connection of incoming and outgoing conductors up to 35 mm <sup>2</sup>
	Fuse terminals	7/8	Terminals which can be used to protect control circuits, for example
	Isolating blade terminals	7/10	Isolation of the circuit, e.g. for test purposes
	Isolating terminals	7/11	Isolation of the circuit, e.g. for test purposes
	Two-tier terminals	7/12	Compact form of the terminal block in which two connection wires can be installed
	Two-tier terminals with isolating function	7/15	Compact form of the terminal block in which two connection wires can be installed
	Diode terminals	7/17	Terminal blocks with integrated diodes
	Two-tier diode terminals	7/18	Terminal blocks with integrated diodes
	8WH high-current terminals	7/20	Connection of incoming and outgoing cables from 50 to 240 mm <sup>2</sup>
	8WH shield terminals	7/24	Terminals for connection of shielded cables

### Overview

The screw terminal is characterized by its global standard, multi-conductor connection and maintenance-free design.

The potential distribution can be quickly implemented with the standardized connecting combs. Flexible chain bridging, level bridging, or skipping of several terminals are possible through two or more bridge shafts in all the terminals.

Reducing combs enable easy connection of terminals with various nominal cross-sections and terminal designs. Reducing combs can be used for the quick assembly of infeed blocks.

The double bridge shaft enables an assembly of any number of terminals with two-pole jumpers. The 2-pole to 50-pole jumpers enable up to 50 terminals to be connected in a single step.

# 8WH1 Screw Terminals

## 8WH through-type terminals

### Overview

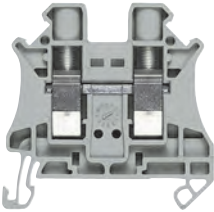

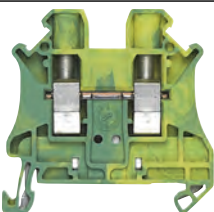

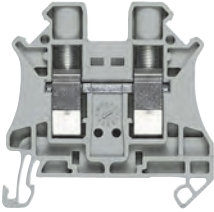

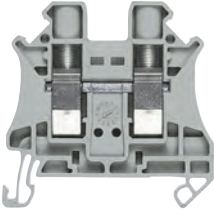

8WH through-type terminals are characterized by their compact design and optimum handling. They are available in conductor cross-section areas from 2.5 to 35 mm<sup>2</sup> and can be inscribed with labels. The double bridge shaft enables individual chain bridging by means of standard connecting combs. Corresponding accessories are available for testing and labeling. Secure electrical and mechanical contact with the support rail is established by simply snapping the terminals onto the rail.

The individual clamping points can be inscribed at the front using the labels.

# 8WH1 Screw Terminals

## 8WH fuse terminals

### Overview

The 8WH fuse terminals adopt the function of the fuse holders for  $5 \times 20$  mm and  $6.3 \times 32$  mm G fuse links and all potential distribution tasks with the double bridge shaft.

The individual clamping points can be inscribed at the front using labels.

# 8WH1 Screw Terminals

## 8WH isolating blade terminals

### Overview

Key features of the 8WH isolating blade terminals are their slim design and high current carrying capacity of 20 A. They can be bridged with standard terminal jumpers over the double bridge shaft.

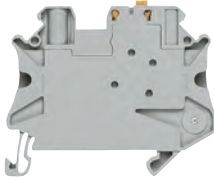

The individual clamping points can be inscribed at the front using labels.

# 8WH1 Screw Terminals

## 8WH two-tier terminals

### Overview

The compact 8WH1 two-tier terminal is available in the nominal cross-sections 2.5 and 4 mm<sup>2</sup>. The voltage levels routed in a 5.2 mm or 6.2 mm grid through two tiers reduce the space required in the control cabinet by a further 50%. Two integral bridge shafts per tier and two facilities for large inscriptions of all clamping points are provided.

With 8WH1 025 two-tier terminals the upper and lower level are connected.

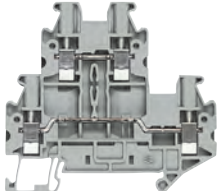

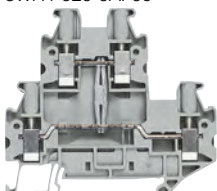

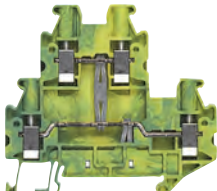

The tier offset on the 8WH two-tier terminals allows for excellent access to the lower level, even when fully wired. Spacer plates can be used to compensate for the tier offset if other terminals are mounted side by side.

The clamping points of the 8WH1 two-tier terminals can be inscribed at the front using the labels.

### Overview

Two-tier terminals with isolating function/isolating blade are also available with the same contour as 8WH1 two-tier terminals.

An increasing number of contact points need to be wired in the same space in the signal wiring. The two voltage levels routed through two separate tiers require 50% less space than equivalent single-tier terminals.

To implement a wide range of wiring tasks, particularly in measuring and control technology, an isolating blade or an isolating plug, a component plug or a fused plug for 5 x 20 mm glass tube fuses can be used in the standardized separation zone in the upper tier.

The looping of measuring devices is possible over the terminal screws with integrated test socket so that voltage and current measurements can be performed on both tiers without interruption. The tier offset makes access to the lower tier much easier.

The clamping points of two-tier terminals can be inscribed at the front using the labels.

### Overview

8WH diode terminals can be used to implement many different wiring tasks. The 1N 4007 diode is soldered in from left to right or vice versa as required.

The double bridge shaft allows for combination with all standard and function terminals.

The 8WH diode terminals have the same contour as the 8WH isolating, isolating blade and fuse terminals. This has the advantage of enabling consistent inscriptions on all clamping points. Secure electrical and mechanical contact with the support rail is assured by simply snapping the terminals onto the rail.

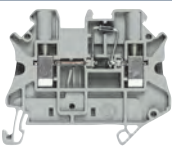

The clamping points of diode terminals can be inscribed at the front using the labels.

# 8WH1 Screw Terminals

## 8WH two-tier diode terminals

### Overview

8WH two-tier diode terminals with a width of only 5.2 mm can be used to implement many different wiring tasks. This makes the following possible in the narrowest of spaces:

- Freewheel diode circuits
- Lamp test circuits
- Signaling and fault signaling circuits.

The clamping points of the 8WH1 two-tier diode terminals can be inscribed at the front using the labels.

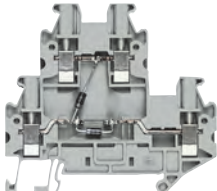

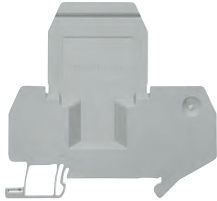

7

# 8WH1 Screw Terminals

## 8WH high-current terminals

### Overview

The high-current terminals cover cross-sectional areas from 16 to 240 mm<sup>2</sup>. A reliable cable connection is ensured through effective design measures, such as:

- Three-point centering of the conductor in the prismatic sleeve base
- Low contact resistance of the contact area through grooved surface
- Screw locking through spring-loaded elements
- Terminals enclosed at both ends.

The terminals have an enclosed insulating body made of polyamide 6.6.

The terminals are available in gray and blue.

8WH labels must be used at the front for inscription purposes.

For terminals with terminal sizes up to 95 mm<sup>2</sup>, green-yellow PE/ground conductor terminals are available.

Mounting on support rails acc. to IEC 60715.

7

### Benefits

- Larger connection up to 240 mm<sup>2</sup>
- The right terminal is always available - whatever the connection functions
- Simple inscription using 8WH standard
- Comprehensive range of accessories available
- Enclosed insulating body made of polyamide 6.6.

### Design

Using the 50 mm<sup>2</sup> terminals, permanent links can be mounted in 2 and 3-pole versions. Combs are required with 95 ... 240 mm<sup>2</sup> terminals.

Assembled terminal blocks

# 8WH1 Screw Terminals

## 8WH shield terminals

### Overview

In industrial process engineering, a high interference immunity is required for electrical measuring and control equipment. It is a decisive factor in the availability of industrial equipment. When designing low-interference systems, great importance is placed on cable shielding and the respective shield ground. The critical point is where the cable shield is connected to the enclosure ground. The connection should have a low resistance and a low inductive reactance, while being quick and easy to establish. The shield terminals are ideally suited for this purpose and can be used with all common cable shields.

The effectiveness of cable shields depends to a large extent on the contact quality of the shield connection. The shield terminals have a large, low-impedance contact area with the shield, which reduces the voltage drop across it. Connected at one end only, shields can help reduce only low-frequency, capacitive interference, such as that caused by high-voltage installations. To pro-

tect from the much more common inductive interference signals, the cable shield must be connected at both ends.

However, differences in the ground potential can cause a compensating current to flow through the cable shield.

To reduce this interference current, it is advisable to connect the shield at several points along its length. The shorter the spaces between the clamping points, the smaller the compensating currents in the cable shield. In systems where safety is especially important, triaxial shields are used. These consist of two braids that are insulated from each other, with the outer shield connected at both ends and the inner one at only one end. With this arrangement, the equipotential bonding currents and the inductive interference are conducted through the outer shield, and the capacitive interference dissipated through the inner shield.

Depending on the length of the terminal strip, two or more support brackets are fitted, which provide both an electrical and a mechanical connection from the busbar to the support rail and therefore to the enclosure ground. The shield terminal is simply fitted to the busbar after all wires have been connected.

A spring-loaded pressure plate regulates the force applied to the cable to ensure an optimum contact with the busbar at all times.

If the cable shield is to be connected at another point of the control cabinet instead of directly in front of the terminal strip, we recommend using support brackets made of molded plastic.

# 8WA1 Screw Terminals

## Introduction

### Overview

	Devices	Page	Function
	8WA through-type terminals	9/9	Connection of incoming and outgoing conductors up to 70 mm <sup>2</sup>
	8WA N-conductor isolating and branch terminals	9/15	N-conductor isolating terminals connected to N-busbar 6 mm x 6 mm
	8WA Insta or three-tier terminals	9/17	These terminals have up to three terminal functions in a single enclosure and may also have an N-isolating terminal connection to an N-busbar 6 mm x 6 mm. They are optimized for distribution board applications in installation technology
	8WA two-tier terminals	9/19	Compact design of the terminal blocks, in which two connecting wires can be installed
	8WA two-tier terminals with electronic components	9/21	Terminal blocks with integrated diodes
	8WA diode and isolating terminals	9/23	Terminal blocks with integrated diodes or isolation for testing purposes
	8WA terminals for components	9/24	Terminals that enable installation of components in the circuit
	8WA fuse terminals	9/25	Terminals which can be used to protect control circuits, for example
	8WA through-type terminals with soldered and plug-in connection	9/26	Terminals with connection for soldered or plug-in connection
	8WA measuring transformer terminals	9/27	Measuring transformer terminals can be used for testing and isolating circuits in switchboards, control rooms, etc. without interrupting operation
	8WA transformer terminals	9/32	Optimized terminals for transformers and rectifiers

### Overview

Terminal strips with different terminal blocks: 8WA1 011-1DG11 terminal blocks, 8WA1 011-1NG31 N-conductor isolating terminals with feeder terminal for N-busbar 6 × 6 mm, 8WA1 011-1PG00 PE terminals, 8WA1 011-1SF12 fuse terminals, and various two-tier terminals. The EN 50022-35-compliant standard mounting rail serves as the PE bar.

Terminal blocks are used for the space-saving connection of incoming and outgoing cables in switchboards and distribution boards.

#### Standards

EN 60664-1,  
EN 60999 and  
IEC 60 947-7-1 or  
IEC 60 947-7-2.

The terminals are finger-safe acc. to IEC 60529 and DIN EN 50274 (except for bare terminals and solder connections). Through-type terminals are resistant to earthquakes according to IEC 60068-2-6.

#### Rated short-time withstand current

Our screw terminals are able to withstand a rated short-time current corresponding to a current density of 120 A/mm<sup>2</sup> specific to the nominal cross-section for a duration of one second.

#### Colored terminal blocks

With colored wiring according to EN 60204-1, the connecting level can also be included in the colored markings:

- Red for control circuits with AC current
- Blue for control circuits with DC current or neutral conductor
- Orange for interlock circuits with AC or DC current which are fed from outside and are live when the main switch is turned off
- Green-yellow through-type terminals for protective conductors (without connection to the support rail).

#### Design

The terminal blocks are insulated at both ends, with the exception of two-tier, flat and bolt-type terminals, which are insulated on one side only.

The insulating material for terminal sizes up to 70 mm<sup>2</sup> is made of thermoplast, polyamide 6.6.

The materials used are environment-friendly: For example, they are cadmium-free and contain no halogens or silicone.

The plastics used are flame-retardant and self-extinguishing according to EN 60695-2-2, VDE 0471, Part 2-2 and UL 94 V-2.

#### Clamping methods

The terminals are designed so that when the terminal screws are tightened, any tensile stress which occurs causes elastic deformation of the terminal bodies. This compensates for any creepage of the clamping conductor. Deformation of the thread part prevents loosening of the clamping screw, even in the event of heavy mechanical and thermal strain (e. g. vibration stress of 10 g or thermal cycles).

The following clamping methods are used: terminal body with pressure plate for terminal sizes 16, 35 and 70 mm<sup>2</sup>. Strain-relief clamps for terminal sizes 2.5, 4 and 6 mm<sup>2</sup>. Screw with connection disk for fuse terminals and component terminals.

#### Terminal size

The terminal size corresponds to the nominal cross-section. According to EN 60947-7-1, a finely stranded copper conductor of nominal cross-section can be connected to any clamping point with or without end sleeve.

#### Mounting

The terminals are snapped onto 35 mm support rails according to IEC 60715 TH35 and secured against movement using end retainers.

A lateral mounting tolerance of 0.2 mm must be maintained between the terminals.

#### Conductor connection

Except for flat and bolt-type versions, all terminal bodies are designed so that solid, stranded and finely stranded conductors with or without end sleeves (according to DIN 46228) can be securely clamped (please observe cross-section).

Damage to the clamped conductors is prevented by pressure plates or strain-relief clamps. For the conductor cross-sections when 1 or 2 conductors are connected, see technical specifications.

# 8WA1 Screw Terminals

## General data on 8WA

### Connection of aluminum conductors

Siemens screw terminals are suitable for connecting aluminum conductors provided there is compliance with the normal processing guidelines, i.e. the brushing and greasing of the conductors before connection.

After a few days, the connection should be tightened again for safety reasons.

8WA1 through-type terminal with screw terminal at both ends, sectional view

### PE and PEN terminals

In switchgear and controlgear systems the support rails for the terminal blocks are frequently used as protective ground bus-bars. The PE terminals establish the connection to the support rail.

The fact that there is no separate PE busbar means the PE terminals, the insulated main conductor terminals and N-conductor isolating terminals can be arranged according to user requirements. This makes the individual circuits clearly manageable.

The bare 8WA1 010-1PH01 PE terminals are primarily used for connecting the shields of shielded cables. They are normally mounted on a standard mounting rail, which is supported by an 8WA1 857 insulation carrier and which is equipped with only one PE terminal for connection to the PE conductor.

### Accessories

#### Parallel connection bars

The connection bars are screwed into the terminals from above and allow parallel connection of up to 10 terminals up to terminal size 35 mm<sup>2</sup>. The 10-pole connection bars can be shortened as required. On 70 mm<sup>2</sup> terminals the connection bars are two-pole.

#### Barriers

Barriers are yellow in color and project beyond the contours of the terminals. They serve the visual separation of groups of terminals, the electrical isolation of adjacent connection bars and the improvement of the rated insulation voltage for soldered and plug-in connections.

#### Insulation plates

8WA1 825 and 8WA1 822-7TK00 insulation plates can be used with different terminals for providing electrical insulation between connection bars.

#### Test sockets and plugs

The 8WA1 854 test sockets for Ø 2.3 test plugs and reduction plugs with a Ø 4 mm hole can be screwed into some terminals in place of the connection bars.

#### Disconnecting links

The 8WA1 865 disconnecting links provide a detachable connection between two adjacent terminals sizes 2.5 to 6 mm<sup>2</sup>.

#### Covers with lightning symbol

The purpose of these covers is to identify the power input terminals. At the same time, they provide additional touch protection.

#### End retainers and end labeling plates

End retainers are available in thermoplastic or galvanized and chromated steel. The end labeling plate can be fitted in an 8WA1 808 end retainer or, in any of three positions, in an 8WA1 805 end retainer.

### Technical specifications

#### Continuous load at increased ambient temperatures

The 8WA1 terminal blocks can withstand an uninterrupted current at ambient temperatures of up to +55 °C. At higher ambient temperatures, a current reduction according to the following formula is required:

$$I_{th2} = I_{th2} \cdot k$$

$I_{th2}$  = Uninterrupted current according to selection tables, relative to the nominal cross-section  
 $I_{th2}$  = Uninterrupted current at increased ambient temperature  
 $k$  = Derating factor according to table

Ambient temperature	Derating factor $k$
60 °C	0.94
65 °C	0.88
70 °C	0.82
75 °C	0.75
80 °C	0.67
85 °C	0.58
90 °C	0.47
95 °C	0.33

The highest permissible clamping point overtemperature of 45 K specified in IEC 60947-1 is not exceeded at an ambient temperature of up to 100 °C.

<sup>1)</sup> Tightening torque also applicable for accessories (socket, connection bars, etc.).

#### Standard mounting rails as PEN rails

Only use Cu busbars.

They must have the same current carrying capacity as protective conductor busbars.

PEN busbars must carry only terminals and no devices.

#### Standard mounting rails as protective conductor busbars

Protective conductors with a larger cross-section than the protective conductor busbar, and with the same conductivity, can be connected to standard mounting rails that are also protective conductor busbars and carry current only under fault conditions.

Standard mounting rail acc. to EN 50022-35 and IEC 60715 TH35	Material	Type	Max. permissible cross-section of connected protective conductor

<sup>1)</sup> End sleeves acc. to DIN 46228 Sheet 1 without insulation. Size corresponds to sleeve nominal size.

<sup>2)</sup> 0.12/0.25 mm<sup>2</sup> corresponds to ∅ 0.4/0.6 mm.

<sup>3)</sup> For 0.75 mm<sup>2</sup> conductors, use end sleeves 1-10 and press on with insert E1 or PZ 1.5.

<sup>4)</sup> At voltages > 500 V, shorten end sleeves with inserted conductor to 10 mm before pressing on.

<sup>5)</sup> Tested up to 16 mm<sup>2</sup>.

<sup>6)</sup> Fit and press on two end sleeves one after the other (up to stop).

<sup>7)</sup> Voltage reduction to 630 V required.

# 8WA1 Screw Terminals

## 8WA through-type terminals

Version	Order No.	MOQ*
---------	-----------	------

### Terminal size 4 mm<sup>2</sup>

8WA1 011-1DG11

8WA1 011-0DG21

#### Through-type terminals, terminal size 4 mm<sup>2</sup>

- Rated uninterrupted current 32 A
- Rated insulation voltage 800 V
- Mounting width 6.5 mm
- Terminal height 30 mm
- Terminal length 41 mm
- **UL** AWG 18-10
- **CE** AWG 18-10

#### Versions

- Single terminals
  - Beige
  - Blue
  - Red
  - Orange
  - Black
- Terminal blocks
  - Beige, 3-pole, width 19.5 mm
  - Beige, 10-pole, width 65.5 mm, labeled 1 ... 10
  - Beige, 10-pole, width 65.5 mm, without inscription

#### Accessories

	Section	Page
• <b>Covers</b>		
- With lightning symbol, for terminal size 4 and 6 mm <sup>2</sup>	Accessories	9/13
- White, facility for inscription, for terminal size 4 and 6 mm <sup>2</sup>	Accessories	9/13
- For connection bars		
◦ Transparent, for terminal size 2.5 to 6 mm <sup>2</sup>	Accessories	9/13
◦ White, facility for inscription, for terminal size 2.5 to 6 mm <sup>2</sup>	Accessories	9/13
• Jumpers, for terminal size 4 mm <sup>2</sup>	Accessories	9/13
• Terminal strips	Accessories	9/14
• Test sockets	Accessories	9/14
• Disconnecting links	Accessories	9/14

#### Note

Between terminals with terminal sizes 2.5 and 6 mm<sup>2</sup>, two 8WH1 820 barriers are required.

• Insulation plates, for terminal size 2.5 to 6 mm <sup>2</sup>	Accessories	9/14
• Connection bars, for terminal size 4 mm <sup>2</sup>		
- For two terminals	Accessories	9/14
- For three terminals	Accessories	9/14
- For four terminals	Accessories	9/14
- For ten terminals	Accessories	9/14
• Barriers, for terminal size 1.5 to 4 mm <sup>2</sup>	Accessories	9/14

#### PE through-type terminals, terminal size 4 mm<sup>2</sup>

- Green/yellow
- Mounting width 7.2 mm
- Terminal height 30 mm
- Terminal length 51 mm
- **UL** **CE**

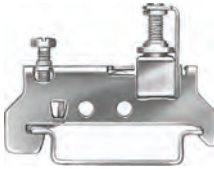

#### Versions

- One screw terminal
- Two screw terminals

### Overview

N-conductor isolating terminals permit an insulation test to be performed without disconnecting the neutral conductor according to DIN VDE 0108 and DIN VDE 0100 (Standards for the erection of power installations).

The branch terminals are used for the connection of lines (L), for example for power supplies, to the 6 mm x 6 mm busbar.

The rated voltage between two branch terminals (1 slide open) is 289 V.

When they are used as shield terminals according to DIN VDE 0160, they provide isolation between the central reference point (shield connection conductor) and the PE conductor.

### Overview

The Insta or three-tier terminals incorporate up to 3 different terminal functions in one insulating body of 6 mm width. The width of 3 Insta terminals corresponds to the modular width of 18 mm standardized in distribution board assembly. **Tools are required to remove the terminals from the support rail.**

All clamping points for incoming and outgoing cables have a cutout for an 8WA8 8.. label. The protective conductor connections are already marked green-yellow and the neutral conductor connections blue.

The N-busbar has the same position for Insta terminals and N-conductor isolating terminals. This allows, for example, the use of a 16 mm<sup>2</sup> N-conductor isolating terminal as an infeed for the N-busbar.

8WA1 011-3JF16, -3JF17 and -3JF18 allow the N-busbar to be routed with a mounting depth of 42.5 mm.

#### PE, L, NT Insta terminal

The 8WA1 011-3JF20 terminal is the basic version for AC circuits. It comprises:

- Protective conductor connection
- Through-type connection for one phase conductor
- Neutral conductor connection that can be isolated from the 6 mm × 6 mm N-busbar.

#### PE, L, N Insta terminals

If no neutral conductor isolation is required, the 8WA1 011-3JF17 terminal is used:

- Protective conductor connection
- Through-type connection for one phase conductor
- Through-type connection for the neutral conductor

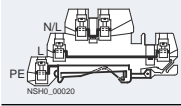

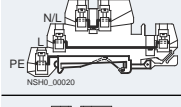

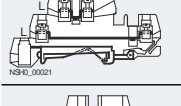

#### PE, L, L Insta terminal

Design of 8WA1 011-3JF16 terminal as previous version. Instead of the through-type connection for the neutral conductor, a through-type connection for a second phase conductor is fitted.

#### L, L Insta terminal

8WA1 011-3JF18 terminal contains two through-type connections for two phase conductors. These are generally used for three-phase outgoing lines.

### Overview

Two-tier terminals are a compact form of the terminal blocks. They are therefore open on one side. They can contain two connecting cables with two connections each or they can be laid out as terminal blocks with four connections on the same potential.

An advantage is the standardized front for mounting, linking and labeling.

### Technical specifications

	Rated voltage	
	AC	DC
Between connection bars		
• With insulation plate	400 V	450 V
• With end plate or barrier	800 V	900 V
• With disconnecting link opened	500 V	600 V
For alternately bent soldering tags	400 V	450 V
For adjacent terminals with soldering tags and insulated plugs	250 V	300 V

Space for components

### Overview

8WA1 011-1SF12 fuse terminals are used to protect control circuits against short-circuits.

The fuse terminals are intended for 5 mm × 20 mm and 5 mm × 25 mm G fuse links up to 6.3 A and 250 V and for bridging links up to 16 A and 800 V and have a mounting for a replacement fuse link.

The fuse terminals are suitable for fuse links, sizes 1/4" × 1", 1/4" × 1 1/4" (6.3 mm × 32 mm) to 6.3 A and 250 V.

Fuse terminals are positive opening fuse-disconnectors.

The fuse links must be replaced at zero voltage. Finger safety is ensured in both closed and open positions.

The LED indicates the status of the disconnected fuse (residual current from 2 mA to 5 mA), but not if the plug is removed (floating).

The double connection is designed so that two conductors with different cross-sections can also be securely connected.

The fixing base of the G fuse terminal allows both centered and recessed mounting, allowing the unhindered routing of a 6 mm × 6 mm N-busbar. The G fuse terminal can therefore be joined into a single group with the other terminals of a branch.

## 8WA measuring transformer terminals

### Overview

Measuring transformer terminals can be used for testing and isolating circuits in switchboards, control rooms, etc. without interrupting operation.

The isolating and instrument isolating terminals contain an isolating device in the through-type connection. The isolating device permits electrical separation between the input and output of a terminal.

Test sockets for plugs with a diameter of 4 mm can be screwed into the front side of the through-type and isolating terminals. The rated insulation voltage between colored test sockets is 125 V. The rated insulation voltage between test sockets and connection bars not connected to the terminal is 16 V (circuit 3, terminals 3 and 5).

Two adjacent terminals can be connected in parallel with the disconnecting link. The disconnecting link can be operated in any position of the isolating device.

### Instrument set for one transformer

The instrument set for one transformer makes the basic circuit of the transformer terminal blocks clear. This basic circuit is also included in much larger instrument sets, which is extended by adding on equivalent circuits. Links between the basic circuits provide many kinds of testing facilities, parallel outgoing lines to other measuring devices, connection of test equipment, etc.

### Instrument set for three transformers

The simplest version of an instrument set for a three-phase circuit consists of three basic circuits strung together without any continuing links or extensions. Instead of isolating terminals 1, 3 and 5, less expensive through-type terminals can also be used.

On the other hand, it is also possible to use instrument isolating terminals for this purpose so that the terminal versions are all the same.

### Instrument set for three transformers with neutral point

The instrument set with a neutral point is an extension of the previous circuit. Four instead of six lines are sufficient for connecting it with the measuring devices. The neutral point is produced on the measuring instruments on the one hand, and using a shortened 8WA1 822-7VH10 connection bar on the other. The instrument isolating terminal 1 is connected to the neutral point using a connecting comb.

### Note

The introduction of the 8WA1 011-1MH10 through-type terminals and their associated disconnecting links has made it considerably easier to configure terminal sets for current transformers. Instead of the 12 isolating or instrument isolating terminals used previously, now only 4 instrument isolating terminals and 3 through-type terminals are required.

### Instrument set with test facility

This instrument set represents a significant enhancement over previous types. In normal operation, terminals 2, 5 and 8 are closed. For testing a measuring instrument (e.g. a plotter), these terminals are opened and terminals 3, 6 and 9 are closed in order to feed in a test signal. The transformers first have to be short-circuited with the disconnecting links between terminals 1-2, 4-5 and 7-8. Wire jumpers connect terminals 1, 4 and 7 with the neutral point. It is formed in terminals 10, 11, 12 and 13 with an 8WA1 887 connection bar.

# 8WA1 Screw Terminals

## 8WA transformer terminals

### Overview

The 8WA9 200 terminals are used for transformers and rectifiers.

The terminals are insulated at both ends and are finger-safe to DIN VDE 0106 Part 100.

The normal labeling accessories can be used to label the transformer terminals.

In addition to the screw connection, the 8WA9 terminals have a 6.3-0.8 flat connector. The soldered connection is protected by a hinged cover following soldering on of the conductor.

# Accessories for 8WA Terminal Blocks

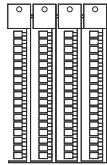

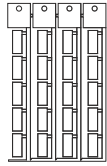

## Accessories for labeling system

### Selection and ordering data

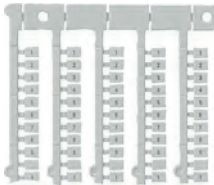

#### Accessories for ALPHA FIX PRINT printer labeling systems

Version	Order No.	MOQ*
 <p><b>Fluid cartridges, for ALPHA FIX PRINT printers</b> Black</p> <p>8WH9 060-6BA08</p>	<b>8WH9 060-6BA08</b>	1 unit
 <p><b>Labels, for labeling 8WA terminal blocks using the ALPHA FIX PRINT printer</b> 5 x 7 mm</p> <p>8WH8 202-2DA05</p>	<b>8WH8 202-2DA05</b>	560 units

#### Accessories for plotter labeling system

Version	Order No.	MOQ*
 <p><b>Labels, for plotter inscription</b> 1 frame = 68 labels</p> <p>NSFH0_00037</p> <p>8WA8 850-2AY</p>	<p><b>8WA8 850-2AY</b> <b>8WA8 851-2AY</b></p> <hr/> <p><b>8WA8 854-2AY</b></p>	<p>1020 units 1020 units</p> <hr/> <p>1260 units</p>
 <p><b>Device labels</b> • 1 frame = 20 labels • 20 x 9 • White</p> <p>NSFH0_00038</p> <p>3TX4 210-0R</p>	<b>3TX4 210-0R</b>	380 units

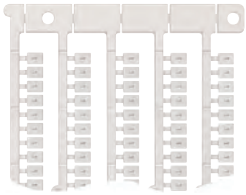

### Selection and ordering data

	Version	Order No.	MOQ*
	<b>Labels, for manual inscription</b> <ul style="list-style-type: none"> <li>• Not suitable for plotting</li> <li>• Blank</li> </ul>

## Catalog notes

### Overview

#### **Trademarks**

All product designations may be registered trademarks or product names of Siemens AG or supplier companies whose use by third parties for their own purposes may violate the rights of the owner.

#### **Amendments**

All technical data, dimensions and weights are subject to change without notice unless otherwise specified on the pages of this catalog.

#### **Dimensions**

All dimensions are in mm.

#### **Images**

The illustrations are not binding.

#### **Technical data**

The technical data in the catalog are for general information. The instruction manuals and the operating instructions on the products must be observed during assembly, operation and maintenance.

Further technical information is available at [www.support.automation.siemens.com](http://www.support.automation.siemens.com)

- under Product List:
  - Technical specifications
- under Entry List:
  - Updates
  - Downloads
  - FAQ
  - Manuals
  - Operating instructions
  - Characteristic curves
  - Certificates

Configurators can be found at [www.siemens.com/lowvoltage/configurators](http://www.siemens.com/lowvoltage/configurators)

#### **Assembly, operation and maintenance**

The instruction manuals and the operating instructions on the products must be observed during assembly, operation and maintenance.

## Overview

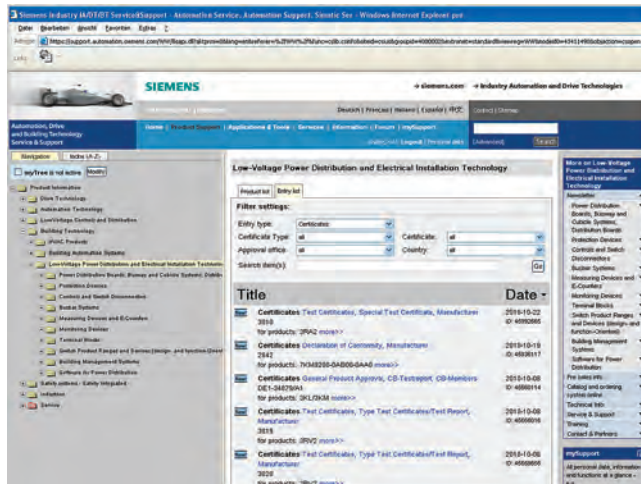

For your configuration systems we can provide technical and graphic data in electronic form for the range of low-voltage power distribution and electrical installation products:

### CAx online generator

For the further processing of low-voltage power distribution and electrical installation products in CAE/CAD systems the online generator provides:

- Technical product master data in CSV and Excel format
- Graphic product data
  - 2D dimensional drawings in DXF format (other formats optional)
  - 3D models in STEP format
  - Internal circuit diagrams
  - EPLAN electric P 8 macros
- Documentation in the form of PDF files
  - Product data sheets
  - Manuals
  - Operating instructions
  - Characteristic curves
  - Certificates
- Product photos
- Texts for tenders in GAEB and Text format.

[www.siemens.com/cax](http://www.siemens.com/cax)

### Certificates

Information on the certificates available (CE, UL, CSA, FM, shipping authorizations) for low-voltage power distribution and electrical installation products can be found on the Internet at:

[www.support.automation.siemens.com](http://www.support.automation.siemens.com)

In the Entry List you can use the certificate type (general product approval, explosion protection, test certificates, shipbuilding,...) as a filter criterion.

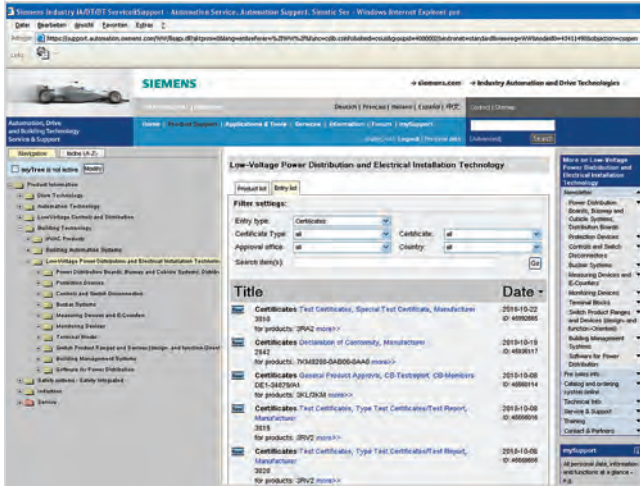

## Standards and approvals

### 811Overview

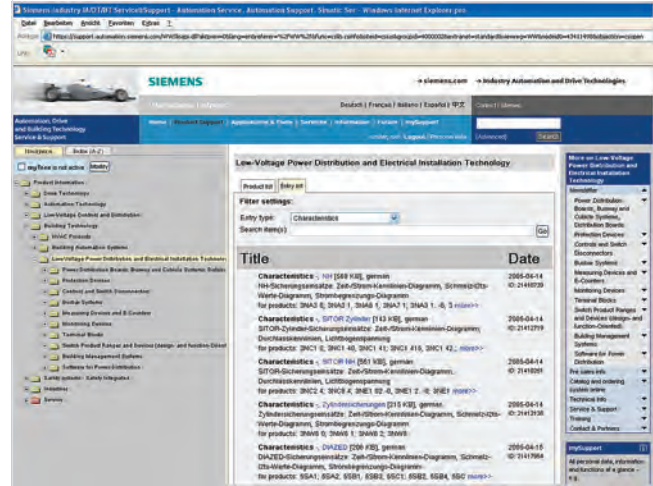

#### Approvals, test certificates, characteristic curves

An overview of the certificates available for low-voltage power distribution and electrical installation products along with more technical documentation can be consulted daily on the Internet at:

[www.support.automation.siemens.com](http://www.support.automation.siemens.com)

Product support: Approvals / Certificates

Product support: Characteristic curves

#### Product standards (excerpt)

IEC	EN	DIN VDE	Title
60947-1	60947-1	--	Low-voltage controlgear and switchgear: General requirements
60947-2	60947-2	--	• Circuit breakers
60947-3	60947-3	--	• Load-break switches, disconnectors, switch disconnectors and fuse-combination units
60947-4-1	60947-4-1	--	• Contactors and motor starters: Electromechanical contactors and motor starters
60947-4-2	60947-4-2	--	• Contactors and motor starters: Semiconductor motor controllers and starters, soft starters
60947-4-3	60947-4-3	--	• AC semiconductor controllers and contactors for non-motor loads
60947-5-1	60947-5-1	--	• Control devices and switching elements: Electromechanical control circuit devices
60947-5-2	60947-5-2	--	• Control devices and switching elements: Proximity switches
60947-5-3	60947-5-3	--	• Proximity switches (specific behavior under fault conditions)
60947-5-5	60947-5-5	--	• EMERGENCY-STOP devices with mechanical latching
60947-5-6	60947-5-6	--	• Control devices and switching elements - DC interface for proximity switches and switching amplifier (NAMUR)
60947-5-7	60947-5-7	--	• Requirements for proximity switches with analog output
60947-5-8	60947-5-8	--	• Approval switches
60947-5-9	60947-5-9	--	• Flow sensors
60947-6-1	60947-6-1	--	• Multifunctional switching device: Transfer switches
60947-6-2	60947-6-2	--	• Multifunctional switching device: Control and protection switching device (CPS)
60947-7-1	60947-7-1	--	• Ancillary equipment: Terminal blocks for copper conductors
60947-7-2	60947-7-2	--	• Ancillary equipment: Protective conductor for copper conductors
60947-7-3	60947-7-3	--	• Ancillary equipment: Safety requirements for terminal blocks
60947-8	60947-8	--	• Releases for the integrated thermal Protection (PTC) of rotating electric machines
62026-2	50295	--	Low-voltage controlgear and switchgear: Actuator-Sensor Interface (AS-I)
60269-1	60269-1	--	Low-voltage fuses: General requirements
60269-4	60269-4	--	Low-voltage fuses: Supplementary requirements for fuse links for protecting semiconductor components
60050-441	--	--	International dictionary/switchgear and/or switching devices and fuses
60439-1	60439-1	--	Low-voltage switchgear assemblies: Type-tested and partially type-tested assemblies

--	--	--	C 8201-4-1	Low-voltage switchgear and controlgear; Contactors and motor-starters

### Approval requirements valid in different countries

Siemens low-voltage switchgear and controlgear are designed, manufactured and tested according to the relevant German standards (DIN and VDE), IEC publications and European standards (EN) as well as CSA and UL standards. The standards assigned to the single devices are stated in the relevant parts of this catalog.

As far as is economically viable, in addition to the pertinent VDE, EN and IEC standards, the requirements of the various regulations valid in other countries are also taken into account in the design of the equipment.

In some countries (see table below), an approval is required for certain low-voltage switchgear and controlgear components. Depending on the market requirements, these devices have been submitted for approval to the authorized testing institutes.

In some cases, CSA for Canada and UL for the USA only approve special switchgear versions. Such special versions are listed separately from the standard versions in the individual parts of this catalog.

For this equipment, partial limitations of the maximum permissible voltages, currents and rated outputs can be imposed, or special approval and, in some cases, special identification is required.

For use on board ship, the specifications of the marine classification societies must be observed (see table below). In some cases, they require type tests of the components to be approved.

The present state of approval is shown in the "Type overview of approved devices" tables on page 11/7.

## Standards and approvals

### Testing bodies, approval identification and approval requirements

	Canada <sup>1)</sup>	USA <sup>1)</sup>	China
Government-appointed or private, officially recognized testing bodies	CSA UL (USA)	UL	CQC
Approval symbol			
Approval requirements	+	+	+
Remarks	UL and CSA are authorized to grant approvals according to Canadian or US regulations. Please note: These approvals are frequently not recognized and additional approval often has to be obtained from the national testing authority.		CCC

### CE marking

Manufacturers of products which fall within the scope of EC directives must identify their products, operating instructions or packaging with a CE mark.

The CE mark confirms that a product fulfills the appropriate basic requirements of all pertinent directives. The mark is a mandatory requirement for putting products into circulation throughout the EC.

All the products in this catalog are in conformance with the EC directives and bear the CE mark.

- Low-voltage directive
- EMC directive
- Machinery directive
- Ex protection directive

The CE mark of conformity: 

### USA and Canada Standards

In the USA and Canada, for machine tools and processing machines in particular, supply lines are laid using rubber insulated cable enclosed in heavy-duty steel piping similar to that used for gas or water pipe systems.

The tubing system must be completely watertight and electrically conductive (especially sleeving and elbows). Since the tubing system can also be grounded, the cable entries of enclosed units equipped with heavy-gauge or metric threads must be fitted with metal adapters between these threads and the tube thread. The necessary adapters are specified for the switchgear as accessories; they should be ordered separately unless otherwise specified.

Low-voltage switchgear and controlgear for auxiliary circuits (e.g. contactor relays, commanding and signaling devices and auxiliary switches/auxiliary contacts in general) are generally only approved by CSA and UL for "**Heavy Duty**" or "**Standard Duty**" and are identified either with these specifications in addition to the maximum permissible voltage or by using an abbreviation.

The abbreviations are harmonized with IEC 60947-5-1 Appendix 1 Table A.1 and correspond to the stated utilization categories.

For various switching devices detailed in the catalog, a note has been included to the effect that, above a certain voltage, the auxiliary switches/auxiliary contacts can only be used if they have the same polarity. This means that the input terminals can only be connected to the same pole of the control voltage, e.g. "600 V AC above 300 V AC same polarity".

### Different features of UL approvals (for USA and Canada)

Recognized Component	Listed Product
Devices are identified on the rating plate using the "UL recognition mark": USA:  ,  Canada:  , 	Devices are identified using the "UL listing mark" on the rating plate e. g. USA:  LISTED 165 C Canada:  LISTED 165 C IND. CONT. EQ. IND. CONT. EQ. (165 C stands for: Siemens, I IA CD Division, Amberg plant)
Devices are approved as modules for "factory wiring", i. e.: as devices for installation in control systems, which are selected, installed, wired and tested entirely by trained personnel in factories, workshops or elsewhere, <b>according to the operating conditions</b> .	Devices are approved for "field wiring", i. e.: • As devices for installation in control systems, which are completely wired by trained personnel in factories, workshops or elsewhere. • As single devices for sale in retail outlets in the USA/Canada.
If devices are  or  approved as "listed products", they are also approved as  or  "recognized components".	

For more information about UL and CSA see 11/5.

### Type overview of approved devices

#### 8WA and 8WH screw terminals

• Spring-loaded terminals 8WH2	4/2

#### B

Barriers	9/14, 9/18, 9/20, 9/23, 9/26, 9/31
Blank labels	9/18
Branch terminals 8WA	9/15
Bridging links	9/25

#### C

Combination plug-in terminals 8WH	5/2
Combs	7/23
Connecting combs	8/9
Connection bars	9/14, 9/18, 9/20, 9/26, 9/31
Connection combs	9/31
Cover segments	2/6, 4/17, 4/24, 4/26, 4/38, 5/6, 6/8, 6/12
Covers	2/6, 2/7, 2/14, 3/5, 3/9, 3/14, 4/17, 4/20, 4/24, 4/26, 4/32, 4/36, 4/38, 4/40, 5/6, 5/7, 6/8, 6/10, 6/12
• For connection bars	9/16, 9/30
• For screw terminals	3/7, 3/11
• for screw terminals	3/11
• For terminal size 2.5 mm <sup>2</sup>	2/10, 2/12
• For terminal size 4 mm <sup>2</sup>	2/8, 2/10, 2/12, 2/14
• For three-tier terminals	4/34

#### D

Device labels	9/18, 10/2
Diode terminal 8WH	4/37
Diode terminals	9/21
Diode terminals 8WA	9/23
Diode terminals 8WH	7/17
Disconnecting links	9/14, 9/20, 9/30

#### E

End labeling plates	10/4
End plates	9/20, 9/22
End retainers	
• Steel	10/5
• Thermoplast	9/13, 9/18
• With screw fixing	10/5

#### F

Feeder terminals	
• For N-busbars	3/9, 3/14, 8/10, 9/16, 9/18
Fluid cartridges for ALPHA FIX PRINT printers	8/2, 10/2
Four-tier motor terminals 8WH	4/35
Fuse terminals 8WA	9/25
Fuse terminals 8WH	4/21, 7/8

#### G

G fuse links	9/25
--------------	------

1. **WARRANTY** - (a) Seller warrants that on the date of shipment the goods are of the kind and quality described herein and are free of non-conformities in workmanship and material. This warranty does not apply to goods delivered by Seller but manufactured by others.

(b) Buyer's exclusive remedy for a nonconformity in any item of the goods shall be the repair or the replacement (at Seller's option) of the item and any affected part of the goods. Seller's obligation to repair or replace shall be in effect for a period of one (1) year from initial operation of the goods but not more than eighteen (18) months from Seller's shipment of the goods, provided Buyer has sent written notice within that period of time to Seller that the goods do not conform to the above warranty. Repaired and replacement parts shall be warranted for the remainder of the original period of notification set forth above, but in no event less than 12 months from repair or replacement. At its expense, Buyer shall remove and ship to Seller any such nonconforming items and shall reinstall the repaired or replaced parts. Buyer shall grant Seller access to the goods at all reasonable times in order for Seller to determine any nonconformity in the goods. Seller shall have the right of disposal of items replaced by it. If Seller is unable or unwilling to repair or replace, or if repair or replacement does not remedy the nonconformity, Seller and Buyer shall negotiate an equitable adjustment in the contract price, which may include a full refund of the contract price for the nonconforming goods.

(c) SELLER HEREBY DISCLAIMS ALL OTHER WARRANTIES, EXPRESS OR IMPLIED, EXCEPT THAT OF TITLE. SPECIFICALLY, IT DISCLAIMS THE IMPLIED WARRANTIES OF MERCHANTABILITY, FITNESS FOR A PARTICULAR PURPOSE, COURSE OF DEALING AND USAGE OF TRADE.

(d) Buyer and successors of Buyer are limited to the remedies specified in this article and shall have no others for a nonconformity in the goods. Buyer agrees that these remedies provide Buyer and its successors with a minimum adequate remedy and are their exclusive remedies, whether Buyer's or its successors' remedies are based on contract, warranty, tort (including negligence), strict liability, indemnity, or any other legal theory, and whether arising out of warranties, representations, instructions, installations, or non-conformities from any cause.

(e) Note: This article 1 does not apply to any software which may be furnished by Seller. In such cases, the attached Software License Addendum applies.

2. **PATENTS** - Seller shall pay costs and damages finally awarded in any suit against Buyer or its vendees to the extent based upon a finding that the design or construction of the goods as furnished infringes a United States patent (except infringement occurring as a result of incorporating a design or modification at Buyer's request), provided that Buyer promptly notifies Seller of any charge of infringement, and Seller is given the right at its expense to settle such charge and to defend or control the defense of any suit based upon such charge. Seller shall have no obligation hereunder with respect to claims, suits or proceedings, resulting from or related to, in whole or in part, (i) the use of software or software documentation, (ii) compliance with Buyer's specifications, (iii) the combination with, or modification of, the goods after delivery by Seller, or (iv) the use of the goods, or any part thereof, in the practice of a process. THIS ARTICLE SETS FORTH SELLER'S ENTIRE LIABILITY WITH RESPECT TO PATENTS.

3. **PERFORMANCE; DELAYS** - Timely performance by Seller is contingent upon Buyer's supplying to Seller, when needed, all required technical information and data, including drawing approvals, and all required commercial documentation. If Seller suffers delay in performance due to any cause beyond its reasonable control, the time of performance shall be extended a period of time equal to the period of the delay and its consequences. Seller will give to Buyer notice within a reasonable time after Seller becomes aware of any such delay.

4. **SHIPMENT, TITLE AND RISK OF LOSS** - Unless the delivery terms of this contract expressly provide for F.O.B. destination, shipping/delivery will be F.O.B. Seller's point of shipment with title to the goods and risk of loss or damage passing to Buyer at that point. Buyer will be responsible for shipment during transit and for filing any damage or loss claims directly with the carrier. Seller may make partial shipments.

5. **TAXES** - Any applicable duties or sales, use, excise, value-added or similar taxes will be added to the price and invoiced separately (unless an acceptable exemption certificate is furnished).

6. **TERMS OF PAYMENT** - (a) Unless otherwise stated, all payments shall be in United States dollars, and a pro rata payment shall become due as each shipment is made. If shipment is delayed by Buyer, date of notice of readiness for shipment shall be deemed to be date of shipment for payment purposes.

(b) On late payments, the contract price shall, without prejudice to Seller's right to immediate payment, be increased by 1 1/2% per month on the unpaid balance, but not to exceed the maximum permitted by law.

(c) If any time in Seller's judgment Buyer is unable or unwilling to meet the terms specified, Seller may require satisfactory assurance or full or partial payment as a

condition to commencing or continuing manufacture or making shipment, and may, if shipment has been made, recover the goods from the carrier, pending receipt of such assurances.

7. **NONCANCELLATION** - Buyer may not cancel or terminate for convenience, or direct suspension of manufacture, except with Seller's written consent and then only upon terms that will compensate Seller for its engineering, fabrication and purchasing charges and any other costs relating to such cancellation, termination or suspension, plus a reasonable amount for profit.

8. **NUCLEAR** - Buyer represents and warrants that the goods covered by this contract shall not be used in or in connection with a nuclear facility or application. If Buyer is unable to make such representation and warranty, then Buyer agrees to indemnify and hold harmless Seller and to waive and require its insurers to waive all right of recovery against Seller for any damage, loss, destruction, injury or death resulting from a "nuclear incident", as that term is defined in the Atomic Energy Act of 1954, as amended, whether or not due to Seller's negligence.

9. **LIMITATION OF LIABILITY** - NEITHER SELLER, NOR ITS SUPPLIERS SHALL BE LIABLE, WHETHER IN CONTRACT, WARRANTY, FAILURE OF A REMEDY TO ACHIEVE ITS INTENDED OR ESSENTIAL PURPOSES, TORT (INCLUDING NEGLIGENCE), STRICT LIABILITY, INDEMNITY OR ANY OTHER LEGAL THEORY, FOR LOSS OF USE, REVENUE OR PROFIT, OR FOR COSTS OF CAPITAL OR OF SUBSTITUTE USE OR PERFORMANCE, OR FOR INDIRECT, SPECIAL, LIQUIDATED, INCIDENTAL OR CONSEQUENTIAL DAMAGES, OR FOR ANY OTHER LOSS OR COST OF A SIMILAR TYPE, OR FOR CLAIMS BY BUYER FOR DAMAGES OF BUYER'S CUSTOMERS. SELLER'S MAXIMUM LIABILITY UNDER THIS CONTRACT SHALL BE THE CONTRACT PRICE. BUYER AND SELLER AGREE THAT THE EXCLUSIONS AND LIMITATIONS SET FORTH IN THIS ARTICLE ARE SEPARATE AND INDEPENDENT FROM ANY REMEDIES WHICH BUYER MAY HAVE HEREUNDER AND SHALL BE GIVEN FULL FORCE AND EFFECT WHETHER OR NOT ANY OR ALL SUCH REMEDIES SHALL BE DEEMED TO HAVE FAILED OF THEIR ESSENTIAL PURPOSE.

10. **GOVERNING LAW AND ASSIGNMENT** - The laws of the State of Georgia shall govern the validity, interpretation and enforcement of this contract, without regard to its conflicts of law principles. The application of the United Nations Convention on Contracts for the International Sale of Goods shall be excluded. Assignment may be made only with written consent of both parties; provided, however, Seller may assign to its affiliate without Buyer's consent.

11. **ATTORNEY FEES** - Buyer shall be liable to Seller for any attorney fees and costs incurred by Seller in enforcing any of its rights hereunder.

12. **DISPUTES** - Either party may give the other party written notice of any dispute arising out of or relating to this contract and not resolved in the normal course of business. The parties shall attempt in good faith to resolve such dispute promptly by negotiations between executives who have authority to settle the dispute. If the matter has not been resolved within 60 days of the notice, either party may initiate non-binding mediation of the dispute.

13. **STATUTE OF LIMITATIONS** - To the extent permitted by applicable law, any lawsuit for breach of contract, including breach of warranty, arising out of the transactions covered by this contract, must be commenced not later than twelve (12) months from the date the cause of action accrued.

14. **PRICES** - In the event of a price increase or decrease, the price of goods on order will be adjusted to reflect such increase or decrease. This does not apply to a shipment held by request of Buyer. Goods already shipped are not subject to price increase or decrease. Orders on a bid or contract basis are not subject to this article. Seller's prices include the costs of standard domestic packing only. Any deviation from this standard packing (domestic or export), including U.S. Government sealed packing, will result in extra charges. To determine such extra charges, consult Seller's sales offices. Orders of less than \$400 will be charged a \$25 handling fee.

15. **ADDITIONAL TERMS OF PAYMENT** - Invoice payment terms are as shown on latest discount sheets as issued from time to time. Cash discounts are not applicable to notes or trade acceptances, to prepaid transportation charges when added to Seller's invoices or to discountable items if there are undisputed past due items on the account. Portions of an invoice in dispute should be deducted and the balance remitted with a detailed explanation of the deduction. Cash discounts will only be allowed on that portion of the invoice paid within the normal discount period.

16. **CHANGES IN LAWS AND REGULATIONS** - Seller's prices and timely performance are based on all applicable laws, rules, regulations, orders, codes, standards or requirements of governmental authorities effective on the date of Seller's proposal. Any change to any law, rule, regulation, order, code, standard or requirement which requires any change hereunder shall entitle Seller to an equitable adjustment in the prices and any time of performance.
